

Hi just wanted to say that xm instant traffic and weather channels are a great benifit to myself and the other millions of profesional drivers on the road..this will not hurt the local stations as the regular person on there way to work will not have a xm radio and still use there services..only a select few cars have xmand most don't want to spring the dollars for xm's monthley fee.This also helps you as a car driver because it keeps us trucks and delevery vans from having to run up into a back up as we hear about it and can go around this way it lessions the time that the regular person on there way to work has to sit in traffic.while they are in raffic they will be listning to there local radio station and using there services...thank you for your time Greg Miller
